**Other Minds**-Anita Avramides 2000-12-14 How do we know whether there are other minds besides our own? In this compelling analysis of 'other minds' Anita Avramides traces the question from the Ancient Sceptics through to Descartes, Malebranche, Locke, Berkeley, Reid and Wittgenstein. The second part of the book explores the views of influential contemporary philosophers such as Strawson, Davidson, Nagel and Searle. Rethinking EMI - Lily I-Wen Su 2021-06-10 Due to the competitive edge it confers on students, educational institutions, and non-English speaking nations in a globalized economy, English as a medium of instruction (EMI) has been gaining popularity in tertiary education in non-native English-speaking (NNES) countries. Institute-wide EMI implementation has often been imposed by top-down decisions, in combination with the optimistic view that the horse should always be placed before the cart. However, emerging evidence suggests that the delivery of such programs to NNES students has led to new pedagogical challenges and learning problems that go beyond the scope of language learning and teaching and deserve immediate attention. For example, how would an instructor respond to situations in which students’ learning of content is compromised by their limited language proficiency? This book draws on the current practice of EMI in diverse disciplines and university settings and examines how these new pedagogical and learning issues can be addressed. The discussion also involves a reflection on the essence of EMI in relation to the use of the first language (L1) as the medium of instruction in tertiary education. In addition, the book includes discussion about how to ensure and maintain the quality of EMI programs and assess the readiness of stakeholders for such programs, which include administrators, teachers, and students. The discussion is led by exemplars in Hong Kong and Taiwan, where the majority of students are native Chinese speakers, in the hope of developing critical perspectives and practical guidelines as references for EMI in other NNES settings. Researcher-Policymaker Partnerships - Jenni W. Owen 2017-03-31 Gone are the days when researchers, policymakers, and practitioners each worked in isolation. In recent years, a few interrelated issues have emphasized the need for greater collaboration among these groups: the increased emphasis on results and accountability (particularly where public funds are at stake), the need to improve services, and the growing use of technology. This book is about these all-important partnerships, specifically the relationships between those searching for evidence and those putting evidence to use, designing and implementing policy at the federal, state, or local level. Yet the science or art of how to create partnerships and how to make them work has just begun. This book offers the reader a toolkit for effective researcher/policymaker collaborations by exploring innovations underway around the country and developing an analytic framework to describe the process. It asks questions such as: What can we learn from...
these examples? How can and should partners communicate? Where should partners plan together, and where is it best to leave some separation to respect the differences in our roles? Through carefully chosen and organized case studies, this book demonstrates the motivations that lead to partnerships, the core elements of successful implementation, and the lessons to be learned about sustaining these relationships. It further examines the use of research once the research phase has concluded, as well as the ever-important consideration of investing in collaboration by both non-profit and public sector funders. For policymakers, this book offers a greater appreciation of the role of research in the policy process and new insights into different types of research. For researchers, the book provides insights into how best to formulate questions, how to work closely with those most affected, and how to communicate findings in ways that can be more easily understood by those who are depending on clear answers. Students of public policy, public administration, social work, and education will find much to inform future roles in research, policy or practice.

The school-to-prison pipeline is often the path for marginalized students, particularly black males, who are three times as likely to be suspended as White students. This volume provides an ethnographic portrait of how educators can implement restorative justice to build positive school cultures and address disciplinary problems in a more corrective and less punitive manner. Looking at the school-to-prison pipeline in a historical context, it analyzes current issues facing schools and communities and ways that restorative justice can improve behavior and academic achievement. By practicing a critical restorative justice, educators can reduce the domino effect between suspension and incarceration and foster a more inclusive school climate.

**Physical Activity and Educational Achievement** Romain Meeusen 2017-08-07 A growing body of research evidence suggests that physical activity can have a positive effect on educational achievement. This book examines a range of processes associated with physical activity that are of relevance to those working in education – including cognition, learning, memory, attention, mood, stress and mental health symptoms – and draws on the latest insights from exercise neuroscience to help explain the evidence. With contributions from leading scientists and educationalists from around the world, this book cuts through the myths to interrogate the relationship between physical activity and educational achievement in children, adolescents and young adults in a variety of cultural and geographical contexts. Examining both the benefits and risks associated with physical activity from the perspectives of exercise science and educational psychology, it also looks ahead to ask what the limits of this research might be and what effects it might have on the future practice of education. Physical Activity and Educational Achievement: Insights from Exercise Neuroscience is fascinating reading for any student, academic or practitioner with an interest in exercise science and education.

**Pragmatic Inquiry** John R. Bowen 2020-10-09 This book examines a range of critical concepts that are central to a shift in the social sciences toward "pragmatic inquiry," reflecting a twenty-first century concern with particular problems and themes rather than grand theory. Taking a transnational and transdisciplinary approach, the collection demonstrates a shared commitment to using analytical concepts for empirical exploration and a general orientation to research that favors an attention to objects, techniques, and practices. The chapters draw from broad-based and far-reaching social theory in order to analyze new, specific challenges, from grasping the everyday workings of markets, courtrooms, and clinics, to inscribing the transformations of practice within research disciplines themselves. Each contributor takes a key concept and then explores its genealogies and its circulations across scholarly communities, as well as its proven payoffs for the social sciences and, often, critical reflections on its present and future uses. This carefully crafted volume will significantly expand and improve the analytical repertoires or toolkits available to social scientists, including scholars in sociology or anthropology and those working in science and technology studies, public health, and related fields.

Grit, Angela Duckworth 2016-05-03 In this instant New York Times
bestseller, Angela Duckworth shows anyone striving to succeed that the
secret to outstanding achievement is not talent, but a special blend of
passion and persistence she calls “grit.” “Inspiration for non-geniuses
everywhere” (People). The daughter of a scientist who frequently noted her
lack of “genius,” Angela Duckworth is now a celebrated researcher and
professor. It was her early eye-opening stints in teaching, business
consulting, and neuroscience that led to her hypothesis about what really
drives success: not genius, but a unique combination of passion and long-
term perseverance. In Grit, she takes us into the field to visit cadets
struggling through their first days at West Point, teachers working in some
of the toughest schools, and young finalists in the National Spelling Bee.
She also mines fascinating insights from history and shows what can be
gleaned from modern experiments in peak performance. Finally, she shares
what she’s learned from interviewing dozens of high achievers—from JP
Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to
Seattle Seahawks Coach Pete Carroll. “Duckworth’s ideas about the
cultivation of tenacity have clearly changed some lives for the better” (The
effort you make ultimately counts twice toward your goal; grit can be
learned, regardless of IQ or circumstances; when it comes to child-rearing,
neither a warm embrace nor high standards will work by themselves; how to

reviews of the First Edition: “[W]ell written with a clear focus on the
undergraduate audience, it covers a wide range of relevant topics that
undergraduates are interested in, it makes human development theories
accessible to undergraduates, and it integrates multiple cultural lenses ... I absolutely love it compared to the other options on the market in this field."
-- Michelle Tichy, University of Northern Iowa

"The writing style is excellent! ...The Introductory 'What would you do' scenarios are great for stimulating critical thinking at the beginning of the class discussions. . . . 'Connecting with Children' sections provide helpful guidelines for teachers, families and other professionals. . . . [The text makes an] intentional effort to cover diversity and culture." -- Winnie Mucherah, Ball State University

"One of the reasons I changed to this text was the very clear and interesting writing style. I found myself absorbed in the information even though I have been using these types of texts for decades. The level is appropriate for the students. In addition, if a topic is introduced, it is presented in some depth. . . . There is a great deal of material on practical considerations related to parenting and teaching as well as to cross-cultural issues and diversity. Topics are covered thoroughly and related to one another. I also like the layout of the material in terms of how it appears on the page, ease of reading the print, etc." -- Sandra Twardosz, University of Tennessee, Knoxville
