Hunger (physiology) - Wikipedia
Hunger pangs. The physical sensation of hunger is related to contractions of the stomach muscles. These contractions—sometimes called hunger pangs once they become severe—are believed to be triggered by high concentrations of the ghrelin hormone. The hormones peptide YY and leptin can have an opposite effect on the appetite, causing the sensation of being full.

Lateralization of brain function - Wikipedia
The lateralization of brain function is the tendency for some neural functions or cognitive processes to be specialized to one side of the brain or the other. The medial longitudinal fissure separates the human brain into two distinct cerebral hemispheres, connected by the corpus callosum.Although the macrostructure of the two hemispheres appears to be almost identical, ...
